

# AcadOnline: content-sharing educational website

## Group: 13

- **Requirements that are not implemented:**

1. We have discussed storing at least pdfs in our systems, but we cannot do it, and we have decided to go with only providing links.
2. We have decided to take one image related to the particular course while adding the course to the system.
3. We have decided to implement forgot password functionality but cannot do it.
4. For load testing, we can only test static pages in Jmeter but can't test dynamic pages because there is an issue with the required login.
5. We thought that users should see course content sorted by their rating, but we can't able to do it.
6. We thought that the user should also be able to manage his/her content from the user profile, but we can't do it.
